

Presentation Concept – Generational Conflict in Switzerland

1. Topic and Main Goal

- **Subject:** Generational inequality in Switzerland across three socio-economic and political dimensions.
- **Three guiding questions:** Who Decides? · Who Pays? · Who Owns?
- **Goal:** Reveal structural differences between the Silent Generation, Boomers, Gen X, Millennials and Gen Z in political participation, financial burden (OKP / AHV) and property ownership.
- **Framing:** Descriptive, not prescriptive – the dashboard surfaces patterns and lets the audience draw their own conclusions.

2. Target Group

- **Primary persona – Lea, 27:** Urban Swiss voter, medium data literacy, directly affected by rising rents and cost of living (from project charta).
- **Secondary audiences:** Politically interested public, students, instructors, and journalists.
- **Context of use:** Laptop and mobile, English user interface, one-page scroll experience.

3. Narrative Elements

- **Scrollytelling structure:** One-page vertical scroll with five chapters – Home → Who Decides → Who Pays → Who Owns → References.
- **Rhetorical questions as section titles:** “Who Decides? / Who Pays? / Who Owns?” create tension and orient the viewer.
- **Constitutional opening quote:** The Preamble line “...responsibility towards future generations” frames the generational contract before any chart is shown.
- **Generation cards (hero section):** Birth-year ranges, age today and witnessed events (“WWII reconstruction”, “Born with smartphones”) act as emotional anchors before the data.
- **Consistent generation color palette:** Cool teal (Silent) → warm red (Gen Z) provides a visual hierarchy across all charts.
- **Interactive Plotly visualizations:** Demographic area chart, voter-turnout seating chart, political-interest trend, institutional-trust trend, left–right bar chart, OKP premium curves, AHV income vs. benefit, ownership rate and living-space comparisons.
- **Interactive controls:** Year sliders (1981–2024 demographic; 2015–2023 SELECTS) and canton toggles let viewers verify the patterns themselves.
- **Contrast and paradox:** Tensions such as rising political interest vs. flat turnout are dramatized as paradoxes that the next chart explains.

4. Link to the Visualization Product

- **Streamlit dashboard (main product):** <https://javi36-podsv-visualisierungsprojekt-04-deploymentapp-ilf1hp.streamlit.app>
- **Documentation site (Quarto / GitHub Pages):** https://javi36.github.io/PODSV_Visualisierungsprojekt/
- **Source repository:** https://github.com/javi36/PODSV_Visualisierungsprojekt

5. Aspects We Want Feedback On

- **Narrative clarity:** Does the three-question structure (Decides / Pays / Owns) read as one coherent argument, or as three separate mini-stories?
 - **Visual readability:** Are the chart types (seating chart, population pyramid, premium curves, ownership comparison) self-explanatory without verbal narration?
 - **Emotional impact and dramatization:** Does the “generational contract” framing land – does it feel motivating, or preachy?
- Target-group fit:** Does the dashboard work for the Lea persona – clear stakes, accessible language, mobile-friendly layout?
